Learning Outcomes

On completion of this course, learners will be able to:

- LO1: Plan a secure, responsible and operable Microsoft Foundry solution by selecting suitable models, services, deployment patterns and controls.
- LO2: Build grounded generative applications with Microsoft Foundry, retrieval patterns, structured prompts and repeatable quality checks.
- LO3: Build and operationalize tool-using and multi-agent solutions with bounded roles, approval controls, tracing and error analysis.
- LO4: Implement multimodal computer-vision workflows for generation, understanding, accessibility and visual safety.
- LO5: Implement text, translation and speech workflows that return reliable structured outputs and handle language-specific limitations.
- LO6: Implement information-extraction and retrieval pipelines with OCR, Content Understanding, Azure AI Search and grounded outputs.

Learning Reinforcement

- Every topic is followed by hands-on labs that learners complete on their own machine.
- Each lab ends with a 'Test it' verification step so learners can confirm their own progress.
- The trainer circulates during lab time to give individual feedback and unblock learners.
- Each topic closes with a recap mapped back to the course learning outcomes.
